

# YBP's GobiAPI Service

YBP Library Services is pleased to announce real-time integration between GOBI orders and library local systems. Currently available to Ex Libris Alma libraries, the GobiAPI Service allows for immediate synchronization once an order has been placed in GOBI.

- Available for print and eBooks
- Fully automated process
- No need for batching, FTPing, or loading files manually
- Replaces MARC-based EOCRs or GobiExport
- Accurate API order data mapped from any field in the GobiSmart screen
- In consortial Alma settings, incoming order matches to the Network Zone first

## And this is just the beginning...

- Further refinements underway for the GobiAPI-Alma integration
- GobiAPI integration planned with other library management systems
